

SignZap Hydrogen Water Bottle

User Manual

Product Introduction

The SignZap Hydrogen Water Bottle uses advanced PEM electrolysis technology to generate high-concentration hydrogen water in just 3 minutes—perfect for daily hydration.

- Capacity: 420ml
- Battery: Rechargeable lithium battery
- Features: Portable, lightweight, USB-C charging

Package Contents

- Hydrogen Water Bottle x1
- USB-C Charging Cable x1
- User Manual x1

How to Use

- Fill the bottle with purified or mineral water. Do not exceed the maximum fill line.
- Close the lid securely and press the power button to begin. The light at the bottom will turn on while the bottle is working.
- After about **3 minutes**, the process will finish, the light will turn off, and your hydrogen water is ready to drink.

Charging Instructions

- Use the included USB-C cable to connect the bottle to a power source.
- The indicator light will flash while charging and stay on once fully charged.
- A full charge allows approximately 20 cycles of hydrogen water generation.

Important Safety Tips

- Use clean water only. Please avoid juice, tea, or any liquids with particles.
- Rinse the bottle with clean water after each use to keep the electrodeplate clean.
- For safety, do not operate the bottle while it is charging.
- If not used for a long time, charge at least once a month to protect the battery.

Potential Benefits of Hydrogen Water

Research suggests hydrogen water may help with:

- Antioxidant support: Helps neutralize harmful free radicals and may reduce oxidative stress.
- Anti-inflammatory support: Some studies indicate it may help reduce markers of inflammation.
- Energy & recovery: May support quicker recovery after exercise and help maintain overall vitality.

Scientific References:

- Journal of Clinical Biochemistry and Nutrition (USA): Found that 6 weeks of drinking hydrogen water helped improve antioxidant activity and general health indicators.
- Osaka University, Japan: Studies showed hydrogen water may help improve glucose levels in type 2 diabetes patients and reduce cellular damage.

FAQ

Q: Why don't I see bubbles when I turn it on?

A: This may be due to water quality or low battery. Try using purified water and ensure the battery is fully charged.

Q: My bottle is leaking. What should I do?

A: If you notice any water leaking from the base, it's usually because the rubber ring (seal) inside the base isn't sitting flat.

Simply unscrew the base, adjust the rubber ring so it lies evenly in place, and screw the base back on tightly.

This should stop the leak immediately.
